

Research report & Research proposal

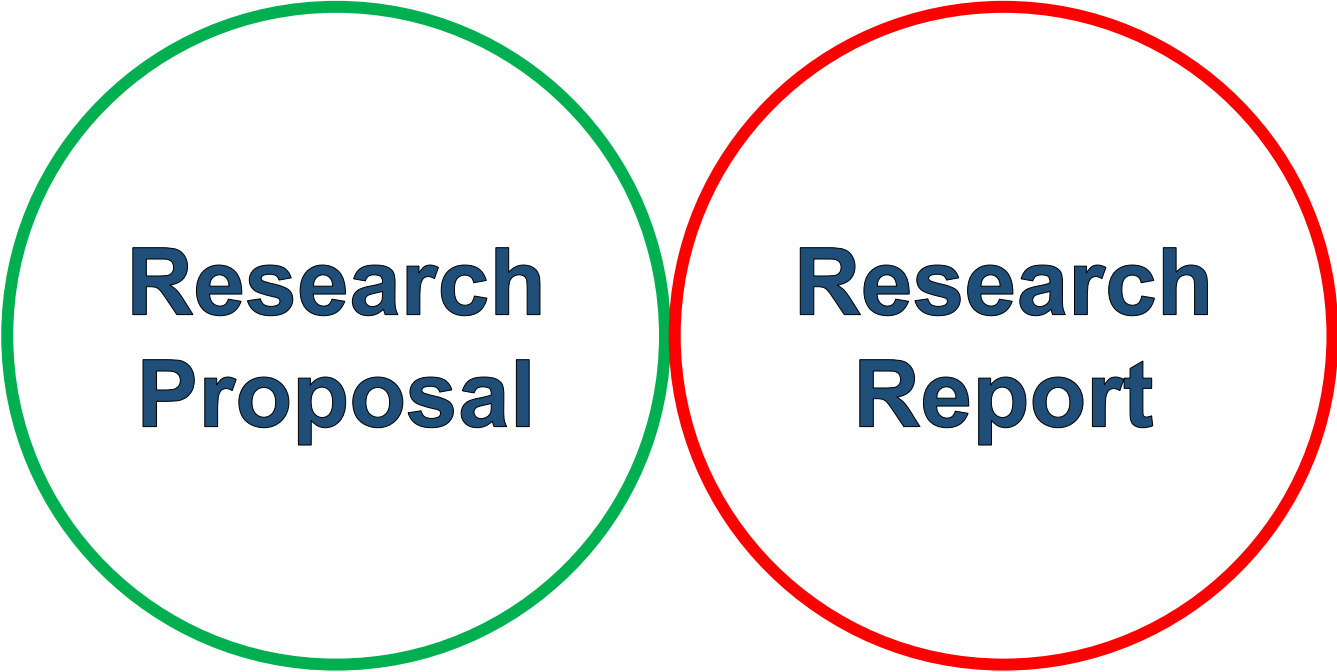

Lecturer: Hue Vu Thi, MSc
Email: huevt@vnuis.edu.vn
Hand-phone: 0965328817

RESEARCH WORKFLOW

LEARNING OUTCOME

- 1. Compare the difference between the research report and a research proposal**
- 2. Understand how to write research reports and research proposals**

**Research
Proposal**

**Research
Report**

Before conducting
the research

Conducting
the research

After conducting
the research

Comparison

THE MEANING

Research Proposal

A research proposal refers to a document that systematically and coherently presents the implementation **plan of research work**.

Research Report

A research report refers to a document that systematically and coherently presents the implementation **process and results of research work**.

Comparison

PREPARATION

Research Proposal

At the beginning of the project

Research Report

After the completion of the project

Comparison

WRITTEN IN

Research Proposal

Future Tense

Research Report

Past Tense

Comparison

OUTLINE

Research Proposal

1. Introduction
2. Literature Review
3. Research Methodology
4. Expected Results
5. Timeline
6. Budget
7. References

Research Report

1. Introduction
2. Literature Review
3. Research Methodology
4. Results
5. Discussion
6. Conclusion
7. Recommendation
8. References

INTRODUCTION

- Describe the novelty and necessity of the research => Aim to attract readers' attention to your research.
- => Then, provide **the objective of your research.**
- **It shouldn't be too long (600-800 words)**
- **04-05 paragraphs:**
 - ✓ Background of the study
 - ✓ Statement of the problem
 - ✓ Purpose and significance of the study
 - ✓ Research objectives

INTRODUCTION

Background of the study

- Provides information on the problem or situation that gave rise to the investigation.
- May refer to secondary data (e.g: publications that was discovered by someone else)

INTRODUCTION

Background of the study

Example

A recent study on game technology (Tan, 2010) shows that nearly 75% of teenagers in Singapore play computer games regularly and the majority of them show signs of addiction. The rise in computer gaming addiction among teenagers is a growing concern and the Ministry of Media Development (MMD) would like to find out the reasons behind this trend.

INTRODUCTION

Statement of the problem

- From the evidence in the background, this paragraph **emphasizes and clarifies the research issue.**

INTRODUCTION

Statement of the problem

Example

The immersive **nature of computer games** has made them particularly enticing to teenagers, often leading to excessive and compulsive gaming behaviors (King et al., 2013). This addiction can have detrimental **effects on mental health**, with studies linking it to heightened levels of anxiety, depression, and social isolation (Lemmens et al., 2015). Moreover, the addictive qualities of games are exacerbated by their design, which frequently incorporates reward mechanisms and progression systems that stimulate the brain's pleasure centers, fostering a cycle of craving and dependence (Kuss & Griffiths, 2012).

INTRODUCTION

Purpose and significance of the study

- Talk about the **need and urgency** to carry out this research.
- May include **the seriousness** of the problem and the **limited** amount of research available on the topic

INTRODUCTION

Purpose and significance of the study

Example

Research on computer game addiction among teenagers holds profound **purpose and significance** in contemporary society. By investigating the underlying mechanisms and risk factors associated with game addiction, researchers can develop tailored interventions aimed at preventing and addressing problematic gaming behaviors (King et al., 2013). However, currently, there is a **limitation on scientific evidence** researching teenagers' attitudes and behavior toward computer games.

INTRODUCTION

Research objectives

Example

Therefore, this study **was/will** be conducted with two main objectives:

- 1- Describe **the attitudes** of teenagers regarding computer game addiction in Singapore in 2021.
- 2- Describe **the behavior** of teenagers regarding computer game addiction in Singapore in 2021.

LITERATURE REVIEW

"In a literature review, you're aiming to summarize and provide a critical analysis of the research arguments you have found in your readings about your research topic."

LITERATURE REVIEW

- Divided into 03-05 subsections
- Each subsection should be about 400-500 words
- The content of the subsection should revolve around the research topic

LITERATURE REVIEW

Outline:

1. Definition of computer game addiction
2. Trends in computer game addiction among teenagers in the world and Singapore
3. The negative consequences of computer game addiction in teenagers
4. Socio-Cultural Factors Influencing Gaming Behaviors
5. Psychological Factors and Gaming Motivations
6. Conclusions

RESEARCH METHOD

- **Study design**
- **Locations and subjects of study (if any)**
- **Metrics and formulas (if any)**
- **Data collection**
- **Data analysis**
- **Ethics Council (if any)**

RESEARCH METHOD

Study design:

- Specify the research design you used

E.g:

- We used/will use **Descriptive Design** through an online survey via Google Form
- We used/will use **A phenomenological design** through personal interviews with research subjects
- We used/will use **the secondary dataset** from Word Bank (<https://data.worldbank.org>) to collect data on GDP, ... in Vietnam from 2000-2023

RESEARCH METHOD

Locations and subjects of study (if any)

E.g:

- Research subjects: All Vietnamese over 18 years old
- Research time: Within a month from November to December 2022
- Research place: Hanoi, Vietnam

RESEARCH METHOD

- **Metrics and formulas (if any)**

Metric	Formula and Description
True Positive Rates (TPR)	$TPR = TP / (TP + FN)$
False Positive Rates (FPR)	$FPR = FP / (FP + TN)$
Precision	$Precision = TP / (TP + FP)$
Recall	$Recall = TP / (TP + FN)$
F-Measure	$F-Measure = 2TP / (2TP + FP + FN)$
Accuracy	$Accuracy = (TP + TN) / (TP + TN + FP + FN)$

RESEARCH METHOD

Data collection

- What is the **method** to collect data?
- What is the **instrument** to collect data?
- **Step** to collect data
- **Sample size**

RESEARCH METHOD

Data collection

E.g:

- Data collect method: Online survey through Google Form
- The instrument: The questionnaire was self-development. It concludes three parts: A- ...; B-...; C-....
- Step to collect data: The survey link was sent to participants via... First, participants were read about the general information of the study. Then click "Next" to proceed with the survey.
- Sample size: Based on the sample size calculation formula, the minimum sample size for this study is $n=503$

RESEARCH METHOD

Data analysis

- What **software** is the data set processed and analyzed with?
- **How** is the data analyzed?
- What **hypothesis test** to use?
- What is the **level of statistical significance**?

RESEARCH METHOD

Data analysis

E.g:

STATA 14 was used for data analysis. Descriptive statistics were used to analyze the characteristics of subjects, the status of post-COVID-19 symptoms, and quality of life. The chi-square test was used to test the difference between males and females. We used univariate and multivariate logistic regression to find out the related factors. The difference was considered statistically significant with $p < 0.05$.

EXPECTED RESULTS

- Separated into **subsections** corresponding to main expected results.
- E.g:

III. Expected results

- 3.1. The characteristics of participants.
- 3.2. The attitudes of teenagers regarding computer game addiction in Singapore in 2021.
- 3.3. The behavior of teenagers regarding computer game addiction in Singapore in 2021.

EXPECTED RESULTS

- **Presentation of anticipated outcomes:** describe the specific findings they expect to uncover.
- **Creation of blank tables/figure:** design "empty" or "blank" tables (and figures) that illustrate exactly how the data will be organized and presented once collected.
- **Data analysis plan:** This involves specifying the statistical tests or qualitative coding methods that will be used to transform raw data into meaningful evidence.

EXPECTED RESULTS

Table 1. Early Childhood Caries (ECC) status in the study subjects.

		Male	Female	Total	p-value
ECC	No n (%)				
	Yes n (%)				
S-ECC	No n (%)				
	Yes n (%)				
Dmft mean (SD)					
Dmfs mean (SD)					

**Chi-square test, **T-test: the difference is statistically significant with $p < 0.05$*

RESULTS

- Separated into **subsections** corresponding to main results.
- E.g:

III. Results

3.1. The characteristics of participants.

3.2. The attitudes of teenagers regarding computer game addiction in Singapore in 2021.

3.3. The behavior of teenagers regarding computer game addiction in Singapore in 2021.

RESULTS

- Present results in tables/graphs/diagrams/images

Table 1. Early Childhood Caries (ECC) status in the study subjects.

		Male	Female	Total	p-value
ECC	No n (%)	22 (9.04)	20 (8.55)	42 (17.95)	0.786*
	Yes n (%)	105 (44.87)	87 (37.18)	192 (82.05)	
S-ECC	No n (%)	37 (15.81)	45 (19.23)	82 (35.04)	0.039*
	Yes n (%)	90 (38.46)	62 (28.50)	152 (64.96)	
Dmft mean (SD)		6.31 (4.13)	5.89 (4.22)	6.11 (4.16)	0.564**
Dmfs mean (SD)		8.56 (6.64)	8.05 (6.11)	8.49 (6.68)	0.362**

*Chi-square test, **T-test: the difference is statistically significant with $p < 0.05$

RESULTS

- Present results in tables/graphs/diagrams/images

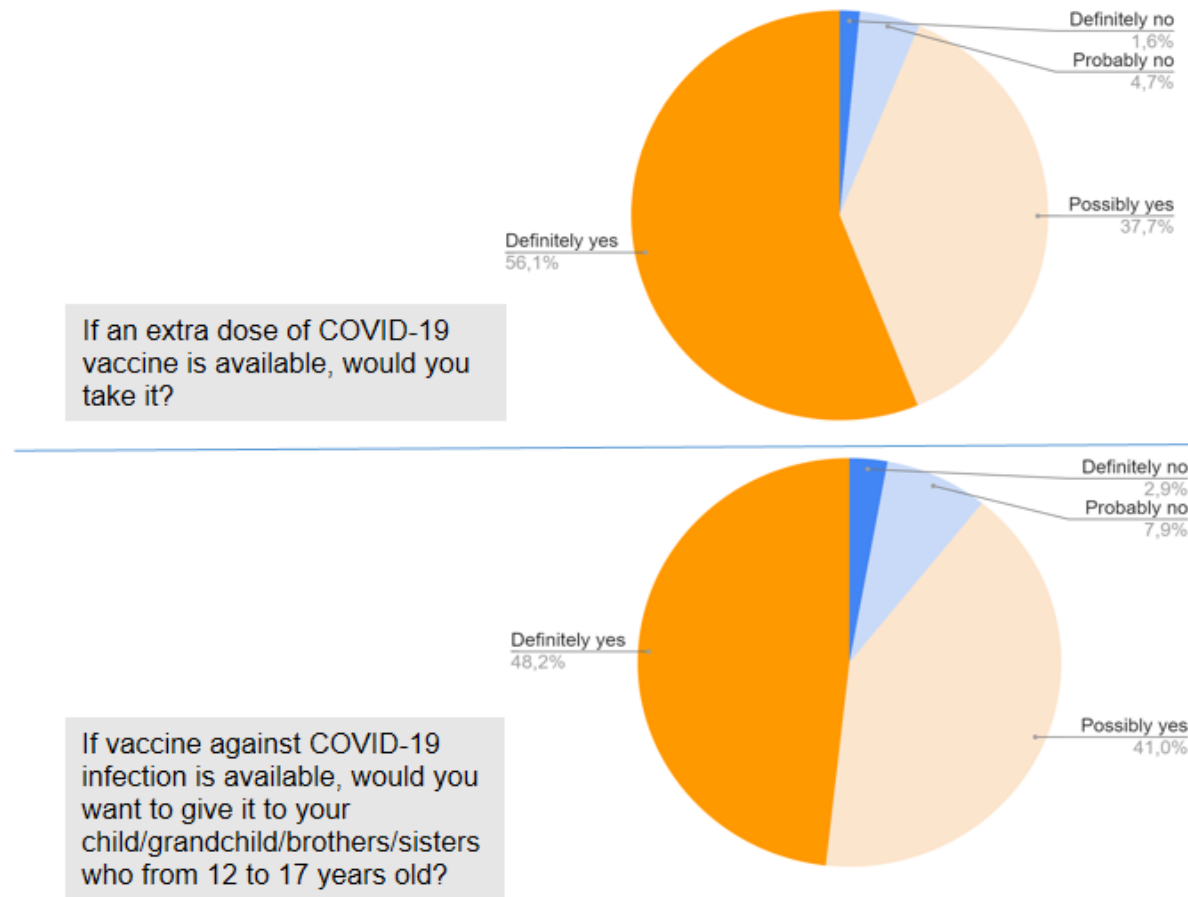

Figure 1. The willingness of receiving the booster doses of COVID-19 vaccines and receiving the COVID-19 vaccine to children from 12 to 17 years old

CONCLUSION

1. Summary highlight points
2. Significance of research: How valuable are research results to science and the community
3. Recommendations

TIMELINE

- Only applicable to **research proposals**
- **Plan steps** to carry out research over time

No.	Tasks	Months											
		1	2	3	4	5	6	7	8	9	10	11	12
1	Protocol preparation	■											
2	Data collection		■	■									
3	Data analysis				■								
4	Initial draft					■	■						
5	Final draft							■					
6	Submissions for publication								■	■			

BUDGET

- Only applicable to **research proposals**
- Estimated **detailed budget** during the research implementation process

Budget description	Unit	Quantity	Unit cost	Total cost
1. Printing	# of pages	200	1.00	200.00
2. Photocopy	# of pages	3,072	0.75	2,304
3. Stationary				
4. Data collectors allowance				
5. Transport cost				
Sub-total				
Contingency				
Total				

OTHER REQUIREMENT

1. Cite the references

OTHER REQUIREMENT

2. Avoid plagiarism

- Do not copy sentences from any source
- Every 5 consecutive words that are the same will be plagiarism
- < 20% plagiarism

OTHER REQUIREMENT

3. Avoid AI writing

- Do not copy sentences from AI assistant tools
- < 10% AI writing per a document

PRACTICE

Working in groups, discuss and prepare in Big Assignment:

- The **objective** of research
- The **outline** of the **Literature Review**
- The **content** of the **Method**
