RESEARCH WORKFLOW

08/03/26

2

LEARNING OBJECTIVES

- 1) **Understand** the definition and aim of literature review
- 2) **Understand** how to write a literature review
- 3) **Understand** how to write a literature review
- 4) **Understand** how to use the Endnote software for reference management

08/03/26

3

A literature review

A literature review is a complete synthesis of relevant documents (information, data, concepts, theories, results, and conclusions) on the topic you are interested in.

08/03/26

4

4

The aims

1. Building the Foundation: Identifying what is already known and what remains unknown about the topic.

2. Synthesis & Comparison: Identifying areas of consensus or contradictions within the findings of previous studies.

3. Ensuring Non-redundancy: Guaranteeing that you are not "reinventing the wheel." -> high novelty.

➡ **Help you answer the question: "Why does this research need to be done now?"**

08/03/26

5

5

Structure of a literature review

Example: Deep Learning to detect COVID-19 using X-Quang image in Vietnam 2022

1. Theoretical Foundation

- Defining the Deep Learning
- Defining the COVID-19
- Defining the X-Quang image
- Defining the application of Deep Learning to detect COVID-19 using X-Quang image

2. Previous studies on the application of Deep Learning to detect COVID-19 using X-Quang image

- In the word
- In Vietnam

3. Identifying the Research Gap

08/03/26

6

6

Steps to writing a literature review

Search

Use keywords across major databases

Screen

Review titles and abstracts to select directly relevant literature

Assess

Evaluate the credibility of journals, the currency of the documents.

Synthesize

Group studies with similar themes, findings, or methodologies. Find out the difference between them.

Write

Transform your analysis into a cohesive.

Search

DATA SOURCES

- The quality of a literature review depends on a careful selection and reading of: **Books, Academic and Professional journals, Reports, Thesis, Conference proceedings, Unpublished manuscripts**
- **“Use a combination of information resources”**

08/03/26

8

8

Data sources (cont)

JOURNALS

- Academic and professional journals are important sources of up-to-date information
- Have generally been peer-reviewed

Scopus

08/03/26

9

9

Data sources (cont)

THESES

- PhD theses often contain an extensive review of the literature in a specific area

➤ Note: not every experimental chapter of a thesis is eventually published in an academic journal

08/03/26

10

10

Data sources (cont)

CONFERENCE PROCEEDINGS

- Providing the latest research, or research that has not (yet) been published

➤ Conference proceedings are very up-to-date

➤ Must critically assess the quality of this information source

08/03/26

11

11

Data sources (cont)

REPORTS

- Government departments and corporations commission
- Useful sources: specific market, industry, or company information

08/03/26

12

12

Data sources (cont)

TEXTBOOKS

- A useful source of theory in a specific area
- Advantages: can cover a broad range of topics
- Textbooks offer a good starting point from which to find more detailed sources

08/03/26

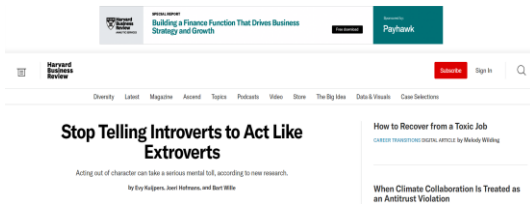

13

13

Data sources (cont)

NEWSPAPERS

- Newspapers provide up-to-date business information
- They are a useful source of specific market, industry, or company information

08/03/26

14

14

Screen

Exercise 1: Find 5 documents from internet data sources for the literature review of this topic or your topic:

Deep Learning to detect COVID-19 using X-Quang image in Vietnam 2022

1. Theoretical Foundation

- Defining the Deep Learning
- Defining the COVID-19
- Defining the X-Quang image
- Defining the application of Deep Learning to detect COVID-19 using X-Quang image

2. Previous studies on the application of Deep Learning to detect COVID-19 using X-Quang image

- In the word
- In Vietnam

3. Identifying the Research Gap

08/03/26

15

15

Assess

How Do You Evaluate the Quality of a Research Article?

1  Published in a peer-reviewed journal or a refereed source
Good journal metrics (primarily SJR/Clarivate iF)

2  Background of the author (affiliation, research profile, other publications, etc.)

3  Novel ideas/addresses on important research gap
Recent and relevant OR slightly older and well-cited
Significant outcome with clear benefits to society/industry

Writing

• “Read a lot to have good writing.”

• Common errors:

- **Disconnected listing:** Simply stating "Author A said..., Author B said..." without providing any comparison or contrast.
- **Outdated literature:** Using sources from 10–20 years ago for rapidly evolving fields such as Biotechnology or AI.
- **Unreliable sources:** Citing personal blogs, Wikipedia, or non-peer-reviewed journals.
- **Plagiarism:** 5 identical consecutive words are counted as plagiarism.
- **Misuse of AI writing tools:** Using AI tools to get the information without double-checking.

08/03/26

21

21

Cite the references

How to avoid plagiarism?

- Fully **cite** the source.
- If using original content, **quotation marks** “...” are required.
- **Rewrite** in your own words.

08/03/26

22

22

Cite the references

08/03/26

23

23

Practice

Exercise 2: Write 200 words base on the references in the Ex1, using Endnote to cite the references:

Data science is a field that consists of collecting, analyzing, and interpreting information and developing methods for data collection or generation to help with extracting purposeful vision, in this case, for RNA therapeutics [1]. Data scientists can facilitate significant advancements by using customized genome sequencing to predict a disease's onset [2]. Based on both genomic and lifestyle information, an individual's health and wellness profile can be created [3].
